Office Action Summary	Application No. 10/535,760	Applicant(s) VETTER ET AL.	
	Examiner Aarti Bhatia	Art Unit 3763	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This is the third Office Action based on the 10/535,760 application filed on 5/20/2005.

Claims 1-20, as amended on 1/16/2009, are currently pending and have been considered below.

Response to Amendment

Claim Rejections - 35 USC § 102

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-14 and 17-20 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,833,653 to Vetter et al.

Vetter discloses a prefilled medical syringe (figure 1) comprising: a syringe barrel (1) enclosing an inner space; a syringe plunger (3) disposed in the space and coupled to a first end of a plunger rod (2) having an outer thread (10) that is formed between the first end and a second end; an end plug (5) closing off a cannula end of the syringe barrel, the end plug having a through-channel closed off by a membrane (7); a finger support (11) disposed on an end of the syringe barrel opposite the end plug and having a through-opening for the plunger rod; and a thread system that cooperates with the plunger rod and with the finger support, the thread system having a thread sleeve (22) with an internal thread that cooperates with the outer thread on the plunger rod, that rotation of the plunger rod into meshed engagement with the internal thread of the thread sleeve causes the plunger rod to be displaced and move toward the cannula (column 4, lines 20-27); wherein the thread sleeve is pressed into the base of the finger

support; wherein the engagement of the inner thread and outer thread increases the pressure in the inner space, which causes the membrane (7) to bulge (see figure 3) and contact a pin (9) that ruptures the membrane.

Allowable Subject Matter

3. Claims 15 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: Vetter discloses the syringe of claims 13 and 14, but the threaded section 22 remains with the finger support and does not move relative to the syringe barrel when meshed with the rod thread.

Response to Arguments

5. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.
